

HOW TO CREATE A PRINT-READY FILE - BANNER STANDS

The following instructions will help you create a print-ready file. If after reading them you are still unsure about anything, please visit the FAQ section of our website, request a professional File Check or contact customer services.

1 FILE FORMAT

Send your file in PDF format in 1:1 scale (not password protected).

2 COLOUR

All files should be sent in **CMYK** (cyan, magenta, yellow, black), with the **Fogra 39 colour profile**. Images in RGB or with PANTONE colours will be converted automatically using a standard colour separation profile.

3 RESOLUTION

The optimal resolution for the print files is between 100 and 150 dpi.

4 TEMPLATE

Always download the template for the product you purchased from the website and use it as the basis for positioning your artwork: this will make it easier to create a print-ready file. On the template you will find the **bleed of 1 mm per side already set up**.

Insert your artwork on the 'Artwork' layer, delete all the guidelines and save the file as a PDF.

WARNING: Do not alter the scale of the design, and **do not resize the template**. Do not use the spot colours **Artios_Cut, Artios_Taglio and Artios_Crease** in the file, as they will not be printed.

WARNING: Do not place important artwork outside **the safe area, as it will not be clearly visible on the finished product**.

5 ADDITIONAL INFORMATION

The minimum line width is 0.5 pt. The minimum printable font size is 12 pt. We **do not advise placing frames and passepartouts too close to the edges**, to avoid any inaccuracy due to the cutting tolerances.

GOOD TO KNOW - Banner Stands
